10

What is claimed is:

A method for encapsulating of embedding a component in a matrix comprising:

a. obtaining a formable mixture by admixing ingredients comprising at least one plasticizable matrix material, a liquid encapsulant component, said liquid encapsulant component comprising an encapsulant and a liquid plasticizer, and at least one component for controlling the rate of release of the encapsulant, wherein said plasticizable matrix material is plasticizable by said liquid plasticizer at a temperature which does not substantially destroy said encapsulant, said admixing being under low shear and low temperature conditions to plasticize the plasticizable material without substantially destroying the encapsulant to obtain a substantially homogeneous plasticized, viscoelastic, formable mixture,

- b. forming said-formable mixture into pieces, and
- c. (drying)said pieces,

wherein said liquid encapsulant component provides at least a substantial portion of the liquid plasticizer for forming said plasticized mixture.

- 2. A method as claimed in claim 1 wherein said admixing is conducted at a temperature of less than or equal to about 50°C.
- 3. A method as claimed in claim 2 wherein the liquid plasticizer content of said liquid encapsulant component is at least about 50 % by weight, based upon the weight of said liquid encapsulant component.
- 4. A method as claimed in claim 2 wherein the liquid plasticizer content of said liquid encapsulant component is sufficient to form a substantially

homogenous formable dough upon admixture of said liquid encapsulant component with said plasticizable matrix material.

- 5. A method as claimed in claim 4 wherein the liquid plasticizer content of said formable dough is from about 10% by weight to about 50% by weight, based upon the weight of the formable dough.
- 6. A method as claimed in claim 2 wherein liquid plasticizer in addition to the liquid plasticizer provided by said liquid encapsulant component is admixed with said plasticizable matrix material to obtain said formable mixture, the formable mixture is obtained in an extruder and extruded through a die without substantially expanding the formable mixture, and the extrudate is cut into pieces.
- 7. A method as claimed in claim 2 wherein the formable mixture is extruded to obtain an extrudate, the extrudate is cut into pieces, and the pieces are dried to a shelf-stable moisture content of less than about 10% by weight, based upon the weight of the pieces.
- 8. A method as claimed in claim wherein said admixing to obtain said formable mixture is conducted at a pressure of from about 1 bar to about 100 bar.
- 9. A method as claimed in claim 2 wherein an additional encapsulant, in solid form, is admixed with said plasticizable matrix material.
- 10. A method as claimed in claim 9 wherein said additional encapsulant is coated with a film-forming material prior to admixing with said plasticizable matrix material.
- 11. A method as claimed in claim 2 wherein said formable mixture is obtained by admixing said ingredients in a continuous mixer to obtain a crumbly dough, feeding the crumbly dough to an extruder, and plasticizing the crumbly dough into

5

ę -:'

a continuous, substantially homogeneous plasticized dough in said extruder, extruding the substantially homogeneous dough through an extruder die, and cutting the extrudate into individual pieces.

- 12. A method as claimed in claim 1 wherein said pieces are coated with a film-forming material.
- 13. A method as claimed in claim 2 wherein said plasticizable matrix material comprises either semolina or flour from cookies or crackers, and said liquid plasticizer comprises water.
- 14. A method as claimed in claim 13 wherein said liquid encapsulant component comprises at least one member selected from the group consisting of enzymes, vitamins, micronutrients, and live microorganisms.
- 15. A method as claimed in claim 2 wherein said at least one release-rate controlling component is a hydrophobic component.
- 16. A method as claimed in claim 13 wherein said hydrophobic component is at least one member selected from the group consisting of fats, oils, waxes, fatty acids, emulsifiers, polyolefins, polydrethanes, polyvinylchloride, paraffins, polyvinyl acetates, and modified starches.
- 17. A method as claimed in claim 2 wherein said at least one release-rate controlling component is a high water binding capacity component.
- 18. A method as claimed in claim 10 wherein said high water binding capacity component is selected from the group consisting of proteins, and hydrocolloids.
- 19. A method as claimed in claim 2 wherein the amount of said at least one release-rate controlling agent is from about 5 % by weight to about 50 % by weight,

20. A method as claimed in claim W wherein the semolina or cookie flour or cracker flour content of said pieces is at least about 40% by weight, based upon the weight of said dry pieces.

13

- An encapsulated product obtained by the method of claim I which is in substantially non-expanded, particulate form, and wherein said encapsulant is at least one heat sensitive pharmaceutical component, neutraceutical component, nutritional component, flavor component, fragrance component, or biologically active component, and said plasticizable matrix material comprises durum wheat.
- An encapsulated product as claimed in claim 21 wherein said encapsulant comprises at least one member selected from the group consisting of enzymes, vitamins, micronutrients, and live microorganisms.
- An encapsulated product obtained by the method of claim 1 which is in substantially non-expanded, particulate form, and wherein said encapsulant is at least one heat sensitive pharmaceutical component, neutrageutical component, nutritional component, flavor component, fragrance component, or biologically active component, and said plasticizable matrix material comprises ground cookies or ground crackers.
- An encapsulated product as claimed in claim 23 wherein said encapsulant comprises at least one member selected from the group consisting of enzymes, vitamins, micronutrients, and live microorganisms.
- 25. An encapsulated product obtained by the method of claim 1 wherein said encapsulant is at least one member selected from the group consisting of: acepromazine acetaminophen, acetohexamide, acetohydroxamic acid, acetycholine, acetylcysteine acyclovir, albendazole, alclometasone dipropionate,

medofenoxate, azathioprine, flutamide, norfloxacin, fendiline, and prajmalium bitartrate.

26. An encapsulated product obtained by the method of claim 1 wherein said encapsulant is at least one member selected from the group consisting of antioxidants, phytochemicals, hormones, vitamins, pro-vitamins, minerals, microorganisms, prebiotics, probiotics, trace elements, essential and/or highly unsaturated fatty acids, antibiotics, nutritional supplements, enzymes, formulations containing zidovudine, macromolecular polypeptides, aromatic nitro and nitroso compounds and their metabolites useful as anti-viral and anti tumor agents, HIV protease inhibitors, antibiotics, viruses, pigments, steroids, oligopeptides, dipeptides, amino acids, flavor-components, fragrance components, detergents and surface-active components, lipid derivatives of phosphonatides, amphiphilic polymers, adenosine derivatives, sulfated tannins, monoclonal antibodies, and metal complexes of water-soluble texathyrin.

27. An encapsulated product obtained by the method of claim 1 wherein said encapsulant is at least one member selected from the group consisting of amylases, proteases, lipases, pectinases, cellulases, hemicellulases, pentosanases, and phytases.

Sub 3

28. A food composition comprising an encapsulated product obtained by the method of claim 1 which is selected from the group consisting of ready-to-eat breakfast cereals, snacks, soups, salads, cakes, cookies, crackers, puddings, ice creams, yogurts, puddings, custards, baby foods, medicinal foods, sports bars, and beverages.

29. A food topping comprising an encapsulated product obtained by the method of claim 1 in granular form.
